Zh. Eksp. Teor. Fiz. **101**, 765 (February 1992)

On page 293, the second sentence after Eq. (35) should read as follows:

A nearly specular reflection of electrons incident on a bismuth surface at angles  $\varphi \approx \pi/2$  was observed in Ref. 14. It was established in the experiments of Ref. 4 that the reflection of electrons from the (001) face in silver is far closer than the reflection from the (011) face to being specular.
